

THINK INSPIRE CREATE

Developing Tomorrow's Technology Today

Who We Are

Advanced Solutions Nederland provide bespoke signal processing algorithms and hardware design services. Our uniqueness enables our clients to turn ideas into cost effective, commercially viable tools.

We deliver a range of efficient, state-of-the-art solutions to the aerospace, automotive, industrial automation, medical systems, telecoms and consumer electronics industries, worldwide.

Our international network of design engineers encompasses over 50 man years of knowledge and experience in DSP algorithm development, software development and hardware design, and is comprised of several doctors, chartered engineers (CEng) and other IT professionals. Our team strives to invest in and develop innovative ideas sourcing the latest technologies.

What We Can Do For You

By matching our work processes to meet your company's exact needs, we enable you to unlock the full potential of your business and stay one step ahead.

Whether you require feasibility advice, critical thinking, or a fully integrated product solution, we offer a comprehensive range of managed services at any stage of your product design. With a successful broad applications portfolio that includes automotive driver assistance aids, analogue sensor conditioning and personal audio entertainment systems, we integrate the best technologies and talents to reduce your time to market.
